You can view explanations of the operation of this watch by accessing the Citizen web site and viewing the “Service&Support.”

URL: http://www.citizenwatch.jp/

This watch is powered by light. If the watch is not exposed to light for a long time, it stops moving. See page 9 for charging the battery.

Features

The combination watch of the analog and digital display

Solar-powered—no need for battery replacement

Lap time measurement per 1/1000 second (→ page 18) with the lap recording function (→ page 22)

World time—easy to see the time of 43 cities all over the world (→ page 24)

Eco-Drive
Race mode quick guide

Setting the distance of the course

1. Press button M to change the mode to Race. (“RAC”)

2. Pull out the crown to position 1.

3. Press button A to display “YES,” then press and hold button M for more than 2 seconds.

4. Press button A or B to adjust the current digit, and press button M to go to the next one.

5. Push in the crown to position 0.
Measuring lap times

1. Press button M to change the mode to Race. (“RAC”)
2. Press button B to start measurement.
3. Press button A to measure lap times.
   - Each time you press button A, a lap time and the speed are displayed.
   - The records are stored in the Lap Record mode.
4. Press button B to stop the measurement.

Checking the records

1. Press button M to change the mode to Lap Record. “FAS” is displayed.
2. Press button A to change the record displayed.
   Each time you press button A, following records are displayed:
   the best time (“FAS”) → the average time (“AVG”) → the worst time (“LAT”) → all lap times from old to new.

For detail, see page 18 for the Race mode and page 22 for the Lap Record mode.

</tbody>
</table>
Before use

Checking the battery
Check your watch as follows before using it:

Check the movement of the second hand.
- Moving at 1-second intervals.
- Moving at 2-second intervals or has stopped.

Check the digital section.
- “掛け” is not displayed.
- “掛け” is displayed.

Expose the dial to light for charging the battery.

Start using the watch!
• To adjust the time and calendar, see page 14.
How to charge the battery

This watch has a battery which is charged by exposing the dial to light such as direct sunlight or fluorescent lamps.

To obtain the best performance:

- Expose the dial to direct sunlight for several hours at least once a month.
- After taking off the watch, put it where the dial is exposed to bright light, such as by a window.
- Before storing the watch in a dark place for an extended period of time, fully charge the battery.

Caution

- When the watch is covered with long sleeves, for example, the battery may not be charged sufficiently. Try to keep the watch exposed to light even when wearing the watch.
- Do not charge the battery at a high temperature (about 50°C/122°F or higher) such as on the dashboard.

See page 32 for charging time.
Before use

■ Checking the reference position
Check whether the reference position is correct or not.

Check and adjust the reference position also in the following cases:
• The correct time is not displayed on the analog section even after the time setting.
• Each chronograph hand does not point to “0/.00” or “60” even after resetting the measurement time.

1. Press button M to change the mode to Chronograph. (“CHR”)
2. Pull out the crown to position 1.
   “0” is displayed and all hands move to indicate the current reference position.

3. Check the reference position.
   • Go to step 3 on page 40 if the reference position is incorrect.

4. Push in the crown to position 0 to finish the check.
   The current time is indicated on the analog section.

1. Chronograph second hand points to “60.”
2. Chronograph 1/10 second and 1/100 second hands point to “0/.00.”
3. Hour, minute, and second hands point to 12:00.
4. 24-hour hand points to “24.”
Changing the mode of the digital section

1. Press button M repeatedly to change the mode.

While calendar or world time is displayed, the digital section is lighted for 2 seconds by pressing button B.

Time and Calendar mode

(→ page 14)

Timer mode

(→ page 28)
**Chronograph mode**  
(→ page 16)

**Race mode**  
(→ page 18)

**Lap Record mode**  
(→ page 22)

**Alarm mode**  
(→ page 26)

**World Time mode**  
(→ page 24)

- **“CHR” (Chronograph)**
- **“RAC” (Race)**
- **Kind of the records**

- **Alarm indicator**
- **City for the alarm setting**

- **Daylight saving time indicator**
- **City of the local time**

- **A (AM)/P (PM) indicator**  
  (for 12-hour clock)
Setting the time and calendar—Time and Calendar mode

- The time on the digital section set here is the basic time of the watch—the home time.
- The analog section indicates the home time corresponding to the setting.

1. **Press button M** to change the mode to Time and Calendar.

2. **Pull out the crown to position 1.**
   The second hand points to the 0 second position, and all hands stop moving.
   The city name starts flashing.

Refer to “Table of city names” (→ page 54) for the selectable cities.
3. Press button M to select an item, and press button A or B to adjust the selected item.

- If you press and hold button A or B, the item changes continuously.
- Use button A for following items: daylight saving time, second, and time system.

4. Push in the crown to position 0 after the adjustment.

The hands move to indicate the adjusted time.

- Even if you push in the crown to position 0 before finishing setting, adjustment you have set is stored.
- You cannot use any button while the hands move.
Using the chronograph—Chronograph mode

You can measure times up to 23 hours 59 minutes 59 seconds 999, per 1/1000 second.

- When the measurement time passes over 23 hours 59 minutes 59 seconds 999, the measurement stops and the measurement time is reset.
- When 60 seconds elapsed after starting /restarting the measurement, the chronograph 1/10 second and 1/100 second hands stop at “0/.00.”
- After the chronograph 1/10 second and 1/100 second hands stop, you can change the mode with the measurement continued (other than the Race mode and Lap Record mode).
1. Press button M to change the mode to Chronograph. (“CHR”)
   • If the chronograph hands do not point to “0/.00” or “60,” adjust
     the reference position. (→ page 39)

2. Press button B to start measurement.
   • To display a split time, press button A. It is displayed for 10
     seconds.

3. Press button B to stop the measurement.
   • To restart the measurement, press button B again.
   • To reset the measurement time, press button A while the measurement is
     stopped.
Measuring lap times—Race mode

You can measure lap times and the average speed of each lap. The records of the latest 20 laps are stored in the Lap Record mode. (→ page 22)

Setting the distance of the course

- To calculate speed, set the distance of the course. (Setting range: 0 to 99.999 km/mile)
- When you set the distance, records in the Lap Record mode are deleted. To cancel the setting, push in the crown to position 0 before step 3 on page 19.

1. Press button M to change the mode to Race. (“RAC”)
2. Pull out the crown to position 1.

3. Press button A to display “YES,” then press and hold button M for more than 2 seconds.
   The past lap records are deleted and the last distance setting is displayed.

4. Press button A or B to adjust the current digit, and press button M to go to the next one.

   • If you press and hold button A or B, the digit changes continuously.

5. Push in the crown to position 0 after the adjustment.
Measuring lap times—Race mode

■ Measuring lap times

- The records of the latest 20 laps are stored in the Lap Record mode. (→ page 22)
- Set the distance of the course to calculate speed. (→ page 18)
- The largest lap number is “99.” It returns to “01” as you take the 100th lap time.
- You cannot change the mode during the measurement.

1. Press button (M) to change the mode to Race. (“RAC”)
2. Press button (B) to start measurement.
3. Press button A to measure lap times.
   Each time you press button A, the lap time and its number (“01” to “99”) are displayed for 7 seconds, then the speed for three seconds.
   • The maximum speed displayed is “999.” If the speed is beyond 999, “---” is displayed.

4. Press button B to stop the measurement.
   Following records are displayed: lap time and its number, speed, and the total of elapsed time.
   • To restart the measurement, press button B again.
   • To reset the measurement time, press button A while the measurement is stopped.

To check the records
Change the mode to Lap Record. (→page 22)
Checking the records of lap times—Lap Record mode

After the lap measurement, you can check the records of the latest 20 laps.

Checking the records

The best time, the average time, and the worst time are displayed, calculated from the stored records.

1. Press button M to change the mode to Lap Record. “FAS” is displayed.
   - When no record is stored, “--” is displayed.

2. Press button A to change the record displayed.
If you press button B while a lap time is displayed, the speed is displayed for three seconds.

“FAS” or “LAT” and the lap number are displayed alternately.

**Deleting the records**

1. Press button M to change the mode to Lap Record.

2. Pull out the crown to position 1.

3. Press button A to display “YES,” then press button M for more than 2 seconds.

   The records are deleted and “--” is displayed.

4. Push in the crown to position 0.
Checking the time of another city—World Time mode

You can display a local time selected among 43 cities or UTC.

- The local time is calculated based on the time difference from the home time.
- If you press buttons A and B at the same time while the crown is set to position 0, you can set the local time as the new home time. (The previous home time becomes the local time.)
- You can set daylight saving time for each city.

See “Table of city names” on page 54 for the selectable cities.
Selecting a city

1. Press button ℹ️ to change the mode to World Time.
2. Pull out the crown to position 1.
3. Press button A or B to select a city, then press button ℹ️ to go to the daylight saving time setting.
   - If you press and hold button A or B, the city name changes continuously.
4. Press button A to select “ON” or “OFF” for daylight saving time.
5. Push in the crown to position 0.
Using the alarm—Alarm mode

You can set the alarm based on the time of the selected city.

To monitor the alarm sound, press and hold button A for more than 2 seconds while the crown is set to position 0. You can monitor it for up to 10 seconds.

1. Press button M to change the mode to Alarm. (“AL”)
2. Pull out the crown to position 1.
3. Press button M to select an item, and press button A or B to adjust the selected item.

- Use button A for the alarm ON/OFF setting.
- If you press and hold button A or B, the item changes continuously (for the city and alarm time setting).

4. Push in the crown to position 0 after the adjustment.

**When the alarm time comes**
The alarm tone sounds for 15 seconds.
- To stop the alarm tone, press any button.
You can set the countdown timer from 1 minute up to 99 minutes per 1 minute.

1. Press button \( M \) to change the mode to Timer. (“TMR”)
   The last timer setting is displayed.
   - Go to step 5 if you do not need to change the setting.

2. Pull out the crown to position 1.

3. Press button \( A \) or \( B \) to adjust the time.
   - If you press and hold button \( A \) or \( B \), the figure changes continuously.
4. Push in the crown to position 0 after the adjustment.

5. Press button B to start countdown.
   “○” appears.
   - Each time you press button B, the countdown starts or stops.
   - To restart the countdown from the set time, press button A while the countdown is running.
   - To return to the set time, press button A while the countdown is stopped.

The countdown continues even if you change the mode during the countdown.

When the set time has passed
The time-up tone sounds for 5 seconds.
- To stop the time-up tone, press any button.
- The remaining time returns to the set time.
Charging the battery

When the battery becomes short of power—Insufficient charge warning function

<table>
<thead>
<tr>
<th>Function and the movement of the watch</th>
</tr>
</thead>
<tbody>
<tr>
<td>When the battery becomes short of power—Insufficient charge warning function ①</td>
</tr>
<tr>
<td>“<em>X</em>” appears on the digital section. The chronograph hands do not move (except the chronograph second hand).</td>
</tr>
<tr>
<td>When the battery reaches low charge—Insufficient charge warning function ②</td>
</tr>
<tr>
<td>The second hand moves once every two seconds. You cannot operate the watch.</td>
</tr>
<tr>
<td>• The alarm tone does not sound.</td>
</tr>
<tr>
<td>• If you have not charged the battery for about three days since the warning movement began, the watch will stop.</td>
</tr>
</tbody>
</table>
When the battery becomes short of power, insufficient charge warning function ① and ② are activated in order. Charge the battery by exposing the dial to light.

<table>
<thead>
<tr>
<th>While the battery is charged:</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1" alt="Insufficient charge warning function" /></td>
</tr>
<tr>
<td>“XX” disappears.</td>
</tr>
<tr>
<td><img src="image2" alt="The two-second interval movement" /></td>
</tr>
<tr>
<td>The second hand starts to move normally.</td>
</tr>
<tr>
<td>- Keep charging the battery until “XX” disappears.</td>
</tr>
</tbody>
</table>
Charging the battery

■ Charging time

Below are the approximate values for when exposing the dial to light continuously.

<table>
<thead>
<tr>
<th>Illuminance (Lx)</th>
<th>Environment</th>
<th>Time for charging fully when the battery is empty (approx.)</th>
<th>Charging time needed for 1-day movement (while the second hand moves normally) (approx.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>3,000</td>
<td>20 cm (8 in.) under a fluorescent lamp (30 W)</td>
<td>200 hours</td>
<td>40 minutes</td>
</tr>
<tr>
<td>10,000</td>
<td>Under cloudy weather</td>
<td>60 hours</td>
<td>12 minutes</td>
</tr>
<tr>
<td>100,000</td>
<td>Under direct sunlight in summer</td>
<td>30 hours</td>
<td>3 minutes</td>
</tr>
</tbody>
</table>

You can calculate the amount of power the watch can get.
For example, if the battery is charged under cloudy weather for about 4 hours, the watch will get the power for approx. 20 days.
To charge the battery enough, expose the dial to brighter light for a long time. Sunlight is more effective than fluorescent lamps.

- You can put the watch under direct sunlight for a long time if the temperature of the watch is kept under 50°C/122°F.

<After the battery is fully charged—Overcharge prevention function>
When the battery becomes fully charged, the overcharging prevention function is activated automatically to prevent excessive charging.
When the dial is not exposed to light for a certain period of time, the power saving function ① and ② are activated as follows:

<table>
<thead>
<tr>
<th>Condition when the function is activated</th>
</tr>
</thead>
<tbody>
<tr>
<td>When the dial is not exposed to light for more than 30 minutes—Power saving function ①</td>
</tr>
<tr>
<td>When the dial is not exposed to light for more than 7 days—Power saving function ②</td>
</tr>
</tbody>
</table>
Caution
Charge the battery if the second hand is moving once every 2 seconds after the power saving function is canceled. (→page 30)

<table>
<thead>
<tr>
<th>Movement of the watch</th>
<th>To cancel the function</th>
</tr>
</thead>
<tbody>
<tr>
<td>The digital section is turned off.</td>
<td>Expose the dial to light or press any button.</td>
</tr>
<tr>
<td>The digital section is turned off and all hands stop at the</td>
<td>Expose the dial to light.</td>
</tr>
<tr>
<td>reference position.</td>
<td>• The hour, minute, second, and 24-hour hands start to move and indicate the current</td>
</tr>
<tr>
<td></td>
<td>time.</td>
</tr>
<tr>
<td></td>
<td>• If the indicated time is not correct, adjust the time and calendar. (→page 14)</td>
</tr>
</tbody>
</table>
If you have a problem with your watch, check the table below.

</tbody>
</table>
Adjusting the reference position

Adjust the reference position in the following cases:

- The correct time is not displayed on the analog section even after the time setting.
- Each chronograph hand does not point to “0/.00” or “60” even after resetting the measurement.

1. Press button (M) to change the mode to Chronograph. (“CHR”)

2. Pull out the crown to position 1.

“0” is displayed and all hands move to indicate the current reference position.
- Go to step 5 on page 41 when the reference position is correct.
(0:00:00/measurement time: 0)

Continued on the next page
3. Press button ⑧ for more than 2 seconds.
“CRS” is displayed.

4. Press button ⑩ to select hands, and press button ⑨ or ⑧ to adjust the position of the selected hands.

The illustration shows the correct reference position.
• Each time you press button M, the adjustable hands move.
• If you press and hold button A or B, the hands move continuously.
• Use button B for the chronograph hands.
• While adjusting the chronograph 1/10 second and 1/100 second hands or the hour and 24-hour hands, the second and minute hands move backward by 3 minutes and 30 seconds so that the hands to adjust can be seen.

5. Push in the crown to position 0 after the adjustment.

The current time is indicated on the analog section.
Resetting the watch

The watch may not work properly if it is affected by static electricity or shock. In this case, reset the watch.

Caution

If you reset the watch, the indication of each mode changes as the table on the right and the records in the Lap Record mode are deleted.

1. Pull out the crown to position 1.
2. Press buttons A, B, and M simultaneously.
   The confirmation tone sounds and “0” is displayed.
3. Correct the reference position.
   Follow step 3 to step 5 on page 40.
After resetting, the indication of each mode changes as follows. Adjust the time and calendar, and other settings.

### Indication of each mode after resetting the watch

Continued on the next page
• Water-resistance for daily use (up to 3 atmospheres):
  This type of watch is resistant to minor exposure to water. For example, you may
  wear the watch while washing your face; however, it is not designed to be used
  underwater.
• Upgraded water-resistance for daily use (up to 5 atmospheres):
  This type of watch is resistant to moderate exposure to water. You may wear the
  watch while swimming; however, it is not designed to be used for skin diving.
• Upgraded water-resistance for daily use (up to 10/20 atmospheres):
  This type of watch may be used for skin diving; however, it is not designed to be
  used for scuba or saturated diving using helium gas.
• Be sure to use the watch with the crown pressed in fully (normal position) to
  ensure the water resistance. If the crown of your watch is the screw down crown, be
  sure to tighten it completely.
• Do not operate the crown or buttons when the watch is wet.
• If water has penetrated the watch, or if the inside of the glass is fogged up and does not become clear in a day, take the watch to your dealer or Citizen Service Center for repair. Leaving the watch in such a state will rust the internal parts and cause malfunction.
• If seawater penetrates the watch, place the watch in a box or plastic bag and immediately take it in for repair. Otherwise, the pressure inside the watch will increase, and parts (glass, crown, buttons, etc.) may come off.
• If the watch is used in seawater, rinse with fresh water afterward and wipe with a dry cloth.

Keep your watch clean
• Keep your watch clean to prevent rust or dirt building up on the watch. They may stain your clothes.
• Wipe off dirt on the leather band with a soft and dry cloth to prevent it from discoloring.
WARNINGS
Handling the secondary battery
• Do not remove the battery. When it is required, keep the battery out of the reach of children to prevent them from swallowing it.
• If the battery is swallowed, consult a doctor and seek medical treatment.

CAUTIONS
Cautions about charging
• Excessively high temperature at charging battery may cause discoloration and deformation of the exterior, and malfunction of the movement.
• Do not charge the battery at a high temperature (about 50°C/122°F or higher). Examples:
  – charging the battery by light such as an incandescent lamp or halogen lamp
  – charging the battery where the temperature becomes extremely high—such as on the dashboard
To avoid injury
• DO NOT wear the watch where the temperature becomes extremely high—such as in a sauna. Otherwise the watch may become hot and cause skin burn.

To avoid malfunction
• DO NOT use the watch where the temperature is lower or higher than the operation temperature specified in the instruction manual. Doing so may cause the watch to malfunction or stop.
• DO NOT place the watch nearby any materials generating a strong magnetic field such as:
  – magnetic health equipment such as a magnetic necklace
  – a magnetic latch of a refrigerator door
  – a magnetic clasp on a handbag
  – speakers of a mobile phone
  – electromagnetic cooking devices
They may interfere with the movement of the stepping motors in the watch and timekeeping becomes inaccurate.

Continued on the next page
Precautions

- DO NOT place the watch nearby household appliances generating static electricity. Timekeeping may become inaccurate if the watch is exposed to such strong static electricity as that which is emitted from a TV screen.
- DO NOT apply any strong shock, for example, by dropping it onto a hard floor.
- Avoid using the watch where it may be exposed to chemicals or corrosive gases. If solvents, such as thinners or benzine, or substances containing such solvents come into contact with the watch, discoloration, melting, cracking, etc. may occur. The case, band, or other parts may become discolored if the watch comes into contact with mercury, such as that used in thermometers.
Maintenance

Daily maintenance
- Rotate the crown while it is pressed in (position 0) and press the buttons periodically so that they will not be rusty.
- Wipe off dirt, perspiration, and water from the case and glass with a soft cloth.
- To clean a metal, plastic, or rubber watchband, wash away dirt with water. Use a soft brush to remove dust and dirt stuck in the gaps in a metal band.
- Do not use solvents (thinner, benzine, etc.), as they may damage the finish.

Periodical inspections
Your watch needs an inspection once every two or three years for safety and longer usage. To keep your watch water-resistant, the packing needs to be replaced regularly. Other parts need to be inspected and replaced if necessary. Ask for genuine Citizen parts upon replacement.

The time difference and city name may change depending on the situation of the country.
How to use the rotating bezel

The rotating bezel is equipped on some models. Using the bezel, you can easily calculate the followings:
1. Speed, driving distance, and required time
2. Fuel consumption rate, fuel consumption, and driving time
3. Conversion (weight/volume/distance)

• Rotate the outside scale for the calculation.

• The way of rotating the bezel differs depending on the type of the watch.
• You need to add a decimal point depending on calculation results.
1. Calculating speed, driving distance, and required time

\[ \text{Speed} = \frac{\text{Driving distance}}{\text{Required time}} \]

△ (Speed index) always indicates a speed.

In the circle A, the speed index points to “80.” Then any other part indicates a pair of driving distance and required time with the speed of 80 km/h. When the driving distance is 400 km (“40”), for example, the required time is 5 hours (“5:00”). In the circle B, a driving distance and a required time are set. Then △ indicates the speed.
2. Calculating fuel consumption rate, fuel consumption, and driving time

\[
\text{Fuel consumption rate} = \frac{\text{Fuel consumption}}{\text{Driving time}}
\]

△ (Speed index) always indicates a fuel consumption rate.

In the circle A, the speed index points to “80.” Then any other part indicates a pair of fuel consumption and the maximum driving time with the fuel consumption rate of 80 l/h. When the fuel consumption is 400 l (“40”), for example, the maximum driving time is 5 hours (“5:00”).

In the circle B, fuel consumption and driving time are set. Then △ indicates the fuel consumption rate.
3. Conversion

Set one of the indexes (▲/▼) to the figure you want to convert. Then the other indexes (▲/▼) point to converted figures.
The example shows 13.1 fuel pounds (base point) is equal to 16.4 oil pounds, 1.82 imperial gallon, 2.18 US gallon, and 8.25 liters.
